

The planned exam dates are readable since the beginning of the semester in the Canvas – as I have shown it on the first lecture. See „Syllabus for the lectures” in the Introduction module.

Ever since the planned dates became final, they are published in the Neptun.

The Neptun-registration for the exam dates starts on the ... (*not published yet*).

The general regulation of the exams are readable on the homepage of the CSBsc education.

Preconditions of participation in the Theory Exam:

1. Practice mark at least 2
2. Registration in the NEPTUN. With the registration the student acknowledges the following statement

„I declare that I have answered all the questions of the Analysis-1 exam at all points independently. I didn't use not allowed tools, I didn't take external help (person, software, etc.), I didn't help another person.”

The exam goes in personal attendance form in two rounds (both of the rounds take place at the same exam date).

1. **Round-1 (=Basic Level): personally in the classroom using Canvas via your devices (mobile tel., etc.)**

15 questions in connection of the list „The questions of the Basic Level Part of the Theory Exam” (it contains ... questions). The questions may be asked in the following forms:

- in Multiple Choice form: in this case you choose the single correct answer and mark it in CANVAS
- in True/False form: in this case you decide that the given statement is true or false and mark it in the CANVAS
- in „Fill in the Blank” form: in this case you type an integer number into the small text box which follows the question in the CANVAS (e.g.: 10, 257, 0, -4, -123)

Correct answer: 1 point, incorrect answer: 0 point.

Evaluation: 0-8 points: failed (1) it is **final exam mark**, it will be written into the Neptun

9-11 points: passed (2) it is **final exam mark**, it will be written into the Neptun

12 points: satisfactory (3) it is **final exam mark**, it will be written into the Neptun

13-15 points: satisfactory (3) it is a **suggested exam mark**, which **either** may be received (in this case it will be written into the Neptun) **or** may be improved in Round-2, but it cannot be derogated

2. **Round-2 (=Advanced Level): personally in the classroom, exclusively for students who have achieved at least 13 points in Round 1.**

- Part-1, writing on paper

Part-1A:

7 questions in connection with any part of the lectures. You have to handwrite the answer on a paper. The list of these questions are not given forward, they are questions in connection with the topics of the lectures. Correct answer: 1 point, incorrect answer: 0 point. Minimum-level: 5 points.

Part-1B:

state and prove one theorem from the list „Theorems to be proved in the Advanced Level Part of the Theory Exam” (it contains ... theorems). You have to handwrite the answer on a paper.

Part-1B is successful if **the statement and the proof are both correct**.

The successfulness of Part-1B is necessary to the successfulness of Part-1. If Part-1B is unsuccessful, then the whole Part-1 is unsuccessful, independently of the result of Part-1A.

Part-1 is successful if and only if Part-1B is successful, **and** Part-1A is 5, 6, 7 points.

After Part-1, independently of its successfulness, the student may continue with Part-2.

- Part-2, writing on a paper:

state and prove one or more given theorems from the list „Theorems to be proved in the Advanced Level Part of the Theory Exam” (it contains ... theorems). You have to handwrite the answer on a paper. Part-2 is successful if **all the statements and all the proofs are correct**.

Evaluation of Round-2: none of Part-1 or Part-2 is successful: the final exam mark is 3
 only one of Part-1 or Part-2 is successful: the final exam mark is 4
 both Part-1 and Part-2 are successful: the final exam mark is 5

The participation in Round-2 is voluntary, the precondition of participation is the **suggested exam mark 3** (13-15 points) in Round-1, which mark cannot be derogated in Round-2. The Round-2 is invalid if the student opens it with 0-12 points in Round 1.

Further technical details will be given later.
