Syntax_2

Check out the **syntax analyzer of the While language (https://canvas.elte.hu/courses/65695/files/4479679/download?wrap=1)** , also reread the **language spec (https://canvas.elte.hu/courses/65695/pages/language-specification-while)** to understand what we are trying to achieve.

Let's extend our lexical+syntax analyzer with the following new language features:

- ++ and -- operators (both a++ and ++a should be accepted)
- for loop
  - 1. version: for <var> := <expr> to <expr> do <stmts> done
  - 2. version: C-style for loop
- time type, time literal and getter functions (hour, minute)
  - **time.ok (https://canvas.elte.hu/courses/65695/files/4479635/download?wrap=1)**
  - **time.error (https://canvas.elte.hu/courses/65695/files/4479636/download?wrap=1)**
- begin-end blocks instead of end_if, do-done, etc
  - **block.ok (https://canvas.elte.hu/courses/65695/files/4479637/download?wrap=1)**
- array type declaration + array initialization + array indexing
  - **array.ok (https://canvas.elte.hu/courses/65695/files/4479642/download?wrap=1)**
  - **array.error (https://canvas.elte.hu/courses/65695/files/4479643/download?wrap=1)**
  - **array-2.error (https://canvas.elte.hu/courses/65695/files/4479641/download?wrap=1)**
  - **array-3.error (https://canvas.elte.hu/courses/65695/files/4479640/download?wrap=1)**
  - **array-4.error (https://canvas.elte.hu/courses/65695/files/4479639/download?wrap=1)**
  - **array-5.error (https://canvas.elte.hu/courses/65695/files/4479638/download?wrap=1)**
- function declaration + function call
  - **function.ok (https://canvas.elte.hu/courses/65695/files/4479644/download?wrap=1)**
