

Welcome to the Basic Mathematics course!

(2nd semester, February 2026)

Course details

All the informations for this course and the Course Notes are available in CANVAS.

In the classes of this course we are going to work on problems across various topics in mathematics, found in the following Course Notes

– *Modules 1-9 in CANVAS: Basic-Mathematics-Precalculus (2019), written by Filipp Zoltán*

– *Modules 10-21 in CANVAS: Basic-Mathematics-Linear Algebra (2021), written by Csörgő István*

– *Modules 22-24 in CANVAS: Basic-Mathematics-Functions (2021), written by Filipp Zoltán*

Purpose of the course: In this subject we are going to:

- revise certain topics in the secondary mathematics syllabus. This provides a good opportunity to consolidate your previous knowledge or fill in any potential gaps.
- learn new, university-level topics (for example: basics of linear algebra, functions).

Course content and syllabus:

- **Course Notes:** In the classes we are working on problems contained in the Course Notes.

Attendance: Attending the classes is compulsory. In order to complete the course successfully, you can be absent from **no more than 6** classes during the semester. If a student is absent from more than 6 classes during the semester, (s)he does not get a grade for the course and cannot take part in the retake test or in the re-examination either.

Short Tests (10 times)

Starting from the second week you have to write a 6 minute-short-test, which is a Canvas quiz with containing 2 questions. The topic of the short test is the topic of the two classes in the previous week. The time of a short test is 6 minutes, and it is allowed to write only in personal attendance form in the classroom, using your own devices (laptop, mobile tel., etc.).

One Short Test worth 2 points, so you can achieve maximally 20 points with the Short Tests.

Evaluation:

0 – 9 points: the Short Test component is unsuccessful

10 – 20 points: the Short Test component is successful. In this case the points above 10 points are added to your total points (which are counted from the Tests) as reward points (see later).

If you miss a Short Test, then it worths 0 point (independently of the reason of the absence). The retake of a Short Test is not allowed.

Assessment and Tests (Great Tests)

In order to successfully complete the course you need to obtain a practice grade of at least 2.

For this you need to meet the following two conditions: You should

- have no more than 6 absences from the classes.
- have achieved a grade of at least 2 based on the Great Tests and the Short Tests completed during the semester.

Your practice grade is determined by your scores in the three tests completed during the semester.

There will be three tests during the semester. Each tests is a written test which:

- is 90 minutes in duration;
- has a maximum score of 50 points;

Each test has two possible outcomes:

- 0 - 16 points: test is failed;
- 17 - 50 points: test is passed successfully.

Absence from a test:

- Being absent from a test is authorised only under exceptional, emergency circumstances and must be signed immediately to your teacher before the test date (not after it). The evidence regarding your absence (for example sickness certificate from a doctor) needs to be presented to the class teacher as soon as possible.
- If you were absent from one of the tests and your absence was authorised, you will have the opportunity to resit the test you missed at a time to be arranged later. Only one missed test can be resat in this way, at only a single appointed time.
- If a student's absence from a test was unauthorised, or a student wants to find some excuses after the tests without signing

it **before** the test is unacceptable and in these cases (s)he cannot resit this test and the result of this test is 0 points.

Practice grade

Based on your results in the three tests a so called preliminary practice grade will be awarded.

Preliminary practice grade:

Case 1: You have passed all the three tests:

If you have passed all the three tests successfully then you will be offered a so called preliminary grade. This grade can be still further improved (see retake test), so this grade is not registered in NEPTUN at this stage yet.

Your preliminary grade will be established based on your total score from the three tests and the reward points of the Short Tests (max. 10 points), according to the grade boundaries below:

Grade boundaries:

- 51- 68: 2 (pass)
- 69- 91: 3 (average)
- 92-120: 4 (commendable)
- 121-160: 5 (excellent)

If the Short Test component is unsuccessful (its total score is 0-9), then the preliminary practice grade is worse with one value:

- 51- 68: 1 (failed)
- 69- 91: 2 (pass)
- 92-120: 3 (average)
- 121-150: 4 (commendable)

Case 2: If you have passed two of the tests, but failed only one of them:

In this case – independently of the total score of the Short Tests - your preliminary practice grade is 1. However, you have the opportunity to complete the retake test in order to improve your result in the test which you previously failed. (This preliminary grade 1 is not registered in NEPTUN.)

Case 3: If you failed at least two tests:

In this case – independently of the total score of the Short Tests - the final practice grade is a grade 1 (fail), which is registered in NEPTUN. You have the opportunity to take the re-examination.

Retake test:

The retake test is taking place at: time and place that will be **specified later**.

The purpose of the retake test:

- Only those students can complete the retake test **who have failed at most one** of the three tests.
- If a student failed one of the three tests, (s)he can retake this test. If the score achieved in the retake test is higher than the score in the test failed originally, then the new score overrides the original one. In this case the student's grade will be recalculated based on his/her new total score, according to the grade calculation method written above. The grade obtained this way is the final practice grade, which will be entered in NEPTUN.
- If a student has passed all the three tests, but (s)he would like to improve his/her preliminary grade, (s)he has the opportunity to retake one of the three tests: only the test in which (s)he achieved the lowest mark from among the three tests can be retaken. If the score achieved in the retake test is higher, than the score in the original test, then the new score overrides the original one. In this case the student's grade will be recalculated based on his/her new total score according to the grade calculation method written above. The grade obtained this way is the final practice grade, which will be entered in NEPTUN.
- The retake test can be attempted only on a single occasion at the time specified above. If a student is absent from the retake test for whatever reason, the preliminary grade will become his/her final practice grade and will be entered in NEPTUN.

Practice grade re-examination:

The re-examination is taking place during the examination period, in a time and place **specified later**.

- Only those students can take part in the re-examination who have a final practice grade of 1 recorded in NEPTUN.
- All the sooner results are cleaned.
- The re-examination is a 120 minutes test, containing $3+3+3 = 9$ questions (3 questions from the topics of each of the three tests taken during the semester).
- The total score of the test is 75.
- To pass the test one should pass a minimum level (7-7-7 points) of all three parts separately.
- The earlier test scores of the student are not taken into account in the re-examination. Only grades 1 or 2 can be obtained in the re-examination. The grade boundaries of the re-examination are as follows:
 - 0 - 29 points: fail (1)
 - 30 - 75 points: pass (2)
